

DISABELING USB PORTS IN WINDOWS

If anyone is smart then he would definitely do this to ensure a tight blockade. He would alter the settings through regedit command on run console. Now how do you unlock it ? You have to go right into where the administrator has been. Here is how.

- Go to Start (or just find it) > **Run** , type “**regedit**” and press enter to open the registry editor
- Navigate to the following key

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\USBSTOR

In the right pane, select **Start** and change the **value to 4**. (The **value 3** will enable USB Storage). Click OK. This will disable USB Ports and don't allow you to use USB or Pen drives.
